The Chairman & Members of the Urban District-Council Seghiel Annual Report Gluttemen, Shave great-pleasure in presenting you with my Aumal Report as Medical Officer of Health for the year 1894. During the year therty five deaths took place from all Causes in the district, 19 males 4 16 females. When he estimate the Dopulation of the district as in former years at 2300 this number ques an annual mortality at the late of 15:2 per Thousand of the population. In the gear 1893 it ambunted, to 20.4 and during 1892 a mortalely at the race of 15:6 per thousand bolamed. These rates give an average mort. alily for the last three glars of 17.2 per Thousand of the population per The deathrate for the year 1894 is thus seen to be very salisfactory but 4 of the deaths were of persons not resident in the district but were lither accidentally Killed on the

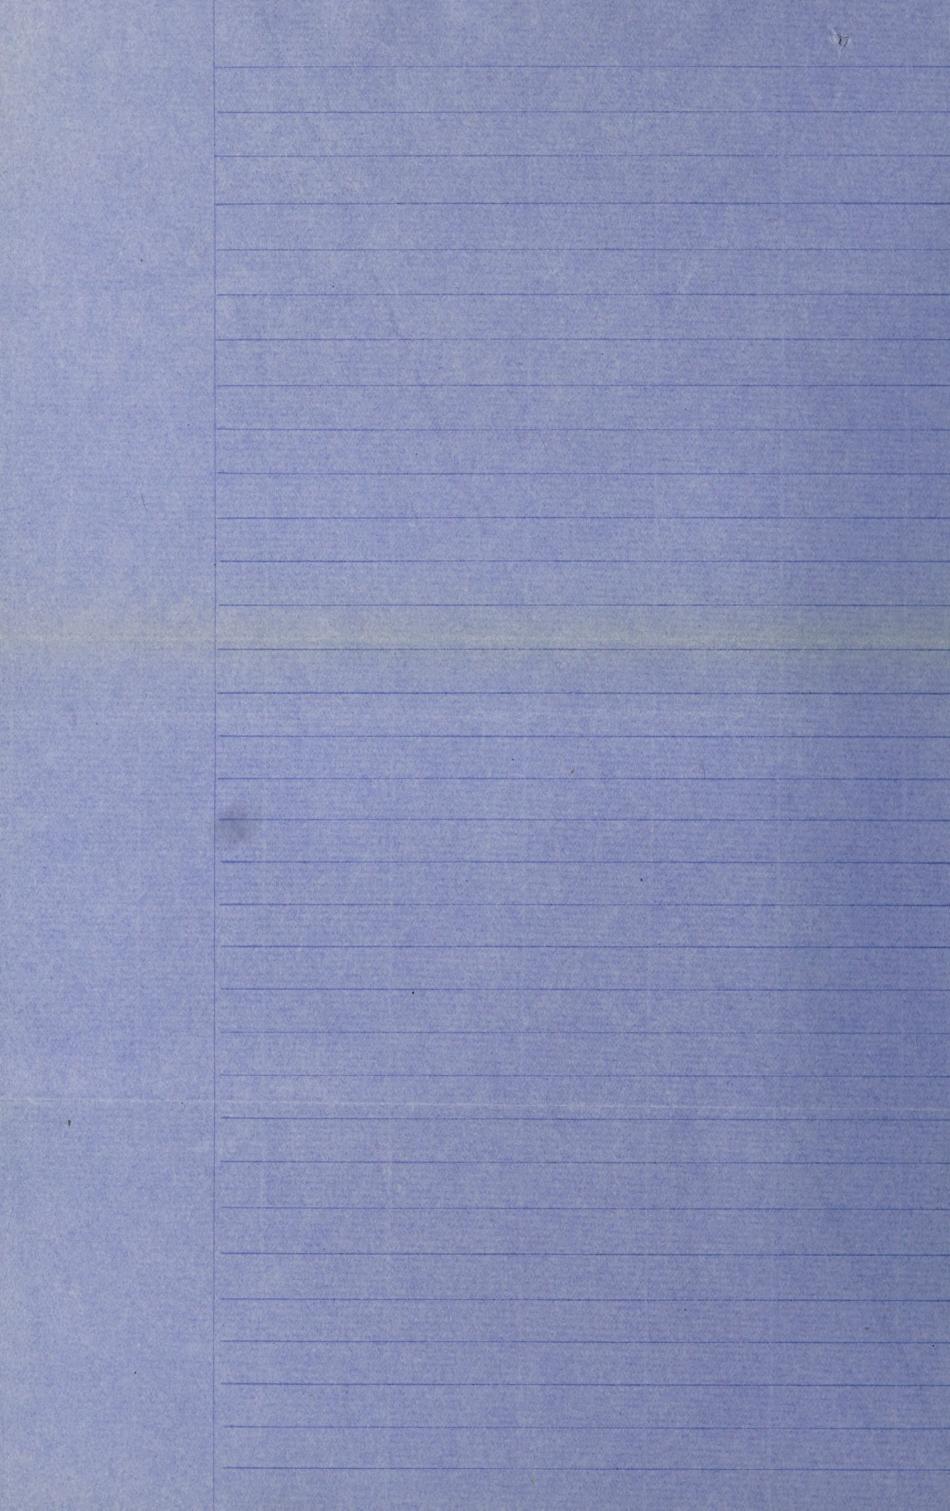

The district or were brought buto It he a dying Condition from Other places. By Oubtracting this number me get the normal mortalely as 31 and consequently a deathrate of 13.4 per thousand Which is more in Consonance with the universally low deathrate Which has prevailed throughout The Country during the year. Tighty sy births have been registered in the district during The year which gives a birthrate of 37:39 per thousand of the pobulation, The birtho during 1893 Ohewed a Tate of 30 and in 1892 The rate amounted to 37.8 per thousand of the population ber annum. This Ohews an average birth rate for the last 3 years of The barions deaths which recurred at all ages during the year here from the following causes.

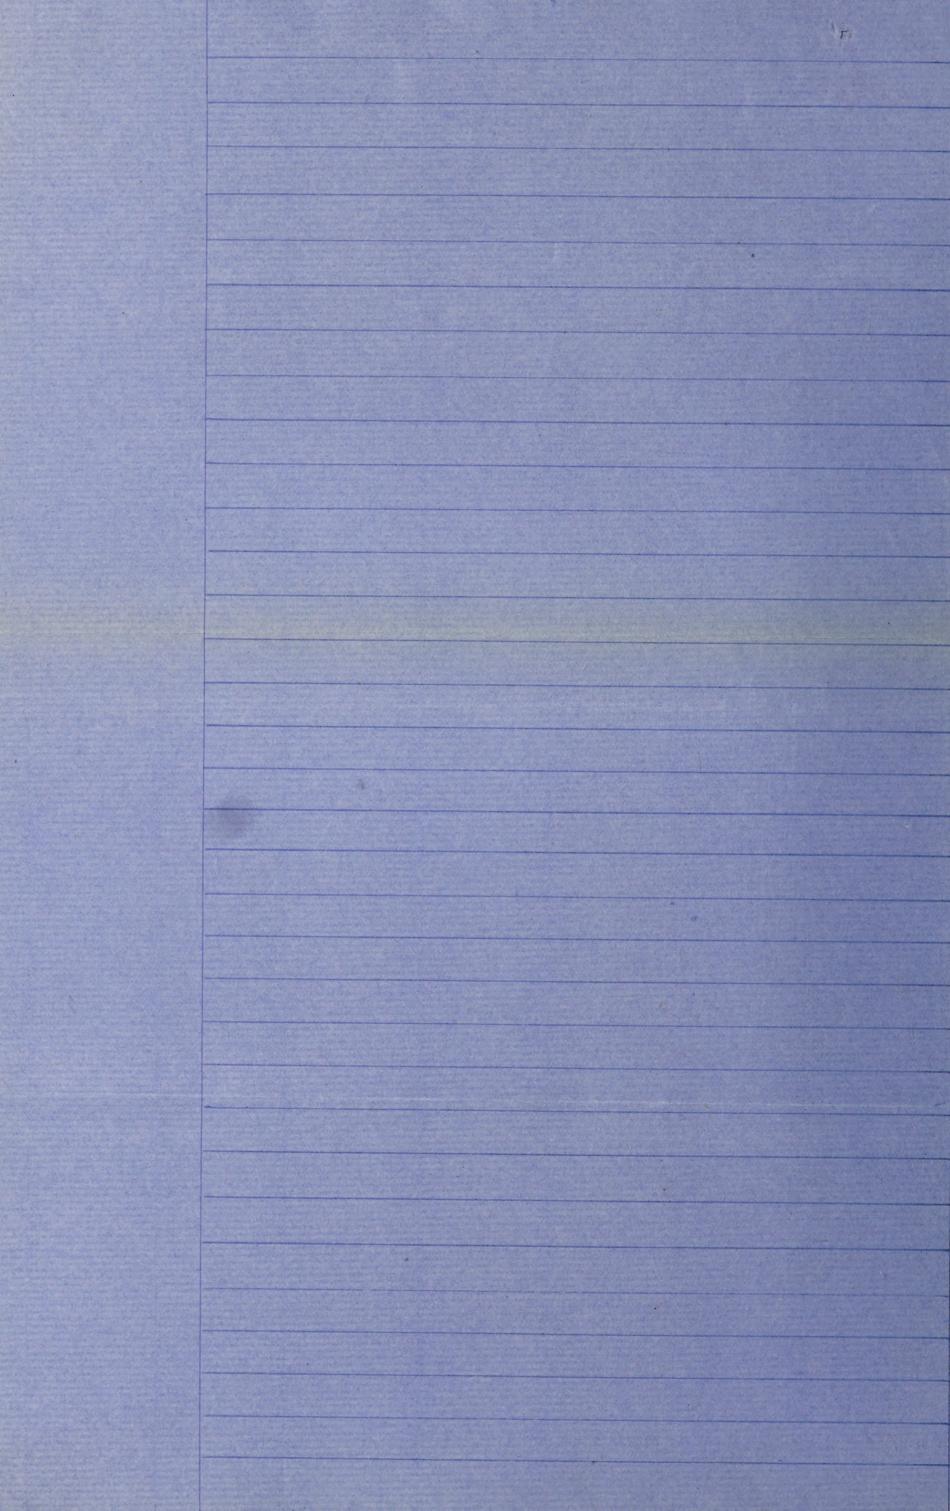

Brouchitis, Meumonia & Pleurise, = 7 Phthisis Debility from Birth Seall-Disease Injuries & Suicide Other Causes

The different-ages at which the death 1 year +under 5 + under 15 + under 25 + under 60 upwards
10 8 4 1 5- 8 The deaths as they occurred in the different mouths, quarters & half gears were; -Jan Feb. Mar Ap. May June July Aug. Sep. Och. Nov. Dec. 212112367118 5- 4 16 10 Quarters. 9 26 Half years. Infant Mortalety. Eighteen of the 35 deaths occurred under 5gears of age and thus gives an annual infaul-deathrate of 7.8 per Mousand of the popula tion and at the late of 209.3 per Thousand of the birthe agistered. This mottality during 1893 Mas at the late of 8.26 per thous-and of the populations and in 1892 an infant-mortality of 9:13 Obtained - The average infant deathrate for the last 3 hears is seen to be at the rate of 8.3 per thousand of the population and

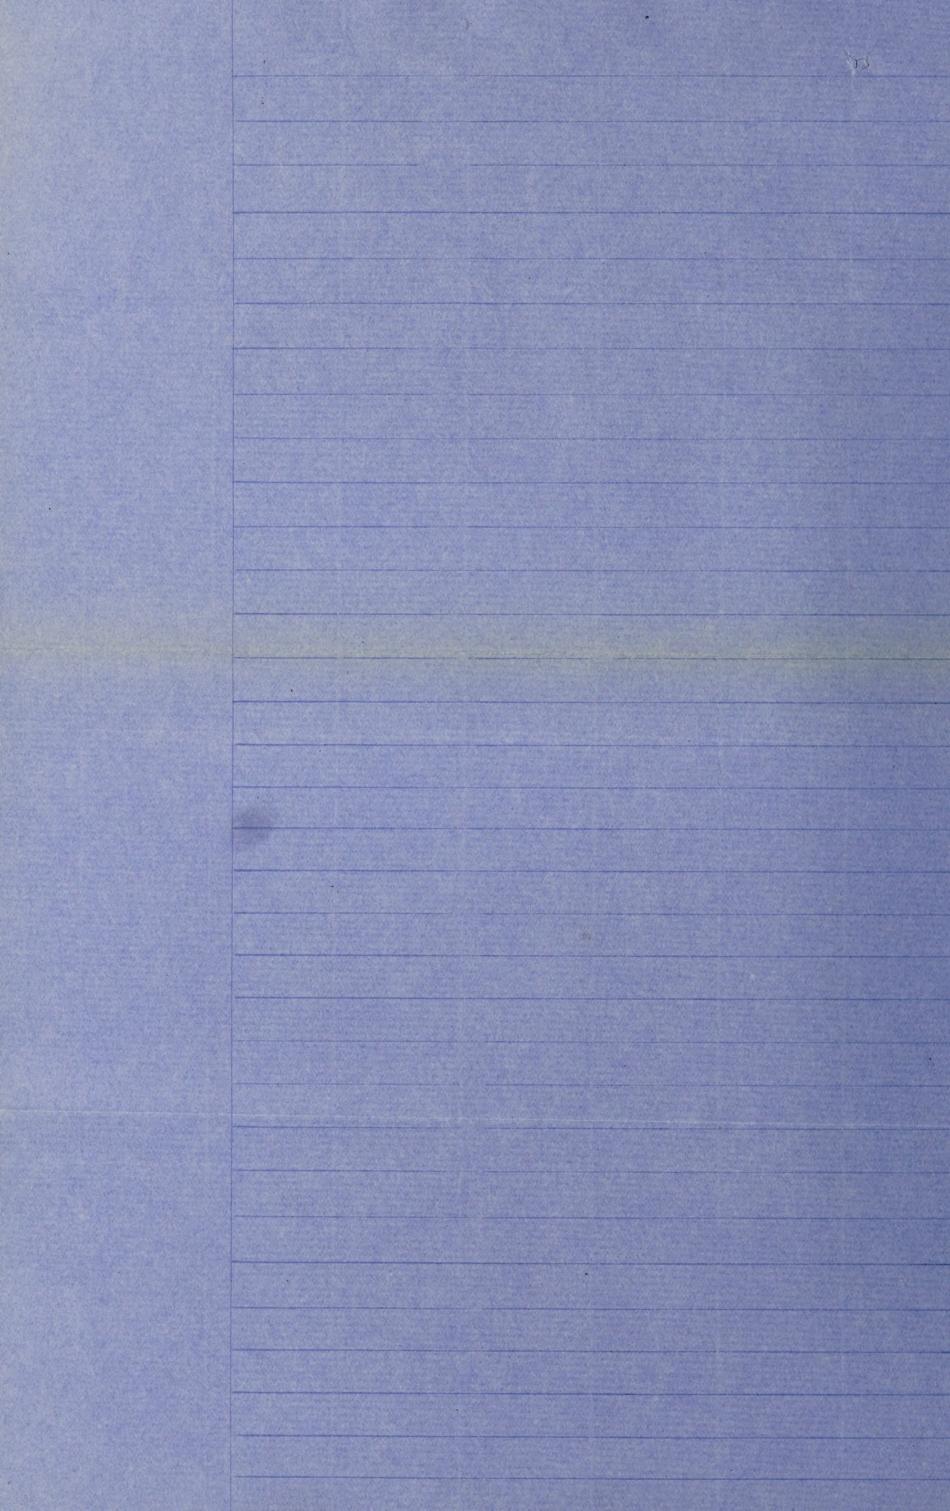

241.9 per thousand of the births registered during that time. When he Examine these 18 deaths more minutely he find that 5died under I mouth, 2 between 1 H6 mouths, 3 under 12 mouths, Thus Shewing that 10 died under 1 year and 8 between 1 x 5- gears. Seven of these deaths here caused by Debility from Birth. Six by Premieduia Ind by Jakes Mesentericco and three by other Causeo. Lymotic Disease;-The Duly forms of Tymotic diseases which have occurred during the year were Diarrhæa and Trysikelas. Diarrhæa;- This disease assumed a much less severe form than In former glass and was neither so prevalent nor la fatab. Only 10 Cases of the disease among adults and largely the result of indiscretions of diet. Torysipelas: - Ino mild cases of

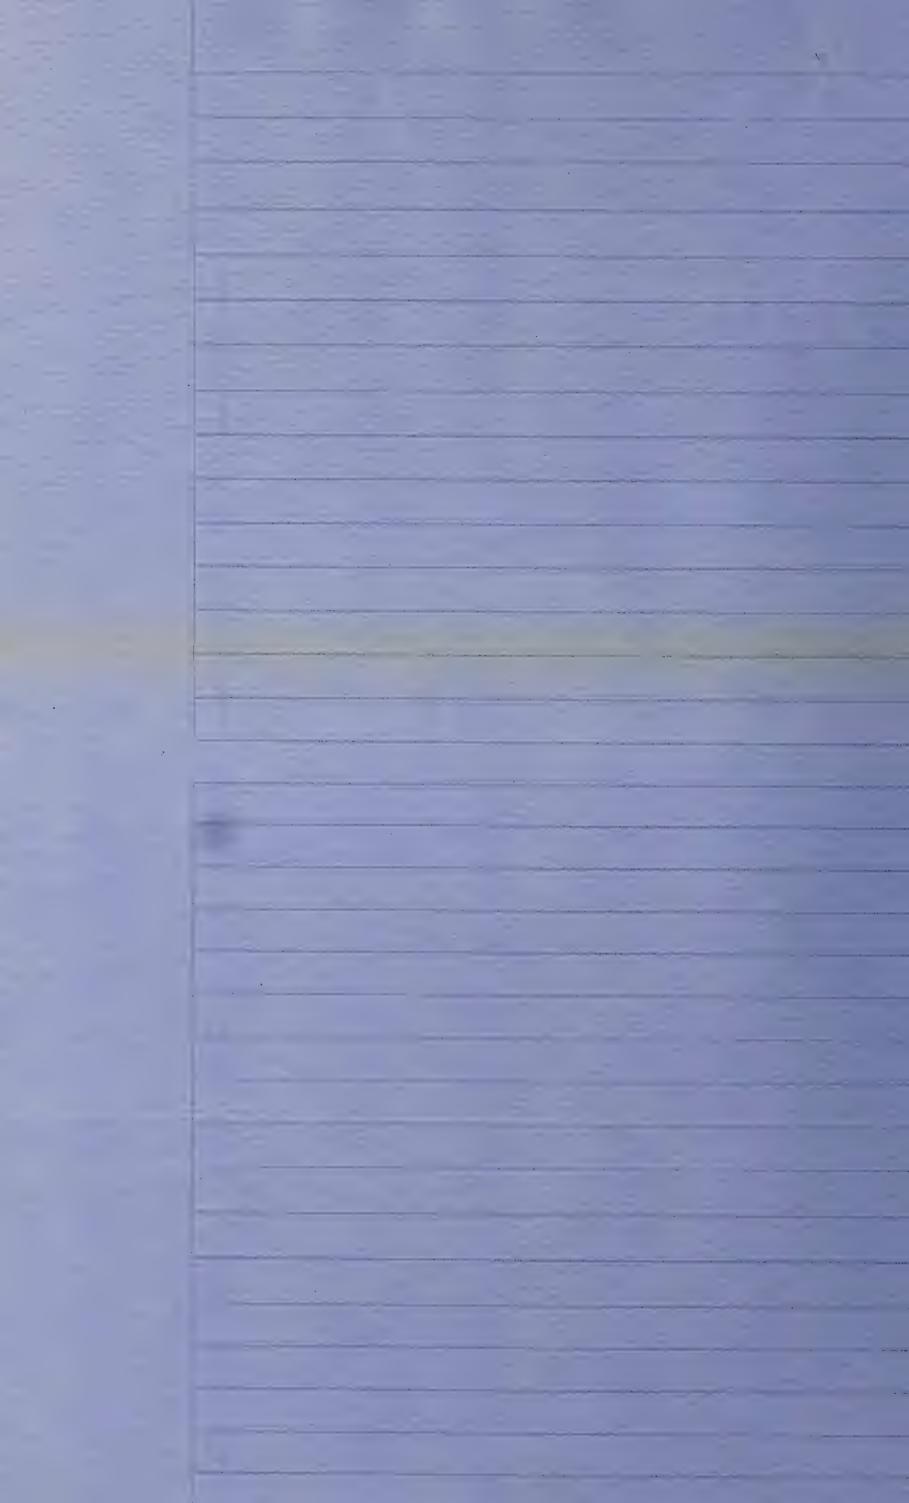

This disease Came hude observa tion during the year but no deaths resulted, Zymotic Mortality; No deaths have taken place in the district frow Zymotic or preventable disease during the hear. This is a most catiofactory state of things when he Cousider the Hature of the district and population! Sauitary Morte; - The samilary hork of the Board has been done very satisfactorily so far as Keeping the ash pilo te regul arly cleaned up, and the all but entire absence of epidemic disease which is so frequently attributable to unsanitary condition Speaks well for this, as nothing due to such a cause has occurred in the form of disease. I have frequently pespected the

I have frequently hispected the Sanitary arrangements of the Sanitary arrangements of the district-during the Gear and have found them generally satisfactory-

medical lysicer agarding the Drivy accomodation which he along with the Saulary Inspector Investigated and reported the Result-to the Boara at last meeting - I hope the Council will at duce see to this matter being dealt with in as thorough a manner as the nature of the district will allows Frould also again urge the Council in the larly mouths of the hear to have all the houses In the Village and especially in the close aguares and gards Thoroughly kinewashed which besides being health, tal adds materially to the cleanliness & brightness of the Villago and Elicoves that gring and dungy look which has become proverbiel by outsides regarding the tillage of Sighill. Thave to congratulate the Colucie blason their Colling luto Office under such favourable con

Members of the new District-Council upon their Coming Into Office under Such favourable conditions of the public health of the district, more especially the low general deathrate, bractically the absence of epidemic disease and upon there not being a

single death attributable to any form of preventable disease which to a most satisfactory Condition and one which I hope will encour. in still improving it possible such a creditable state of matters he the district lutrusted to their The Local Government Brand Schedules are appended to Janes How Misterner Attitudiffe Sh. NOTES ON TABLES A AND B.

- Note 1. Medical Officers of Health of "Combined Districts" must make a separate Return for the District of each District Council.
 - 2. Medical Officers of Health acting for a portion only of the District of a District Council should write, in the heading of the Table, the designation of the Division for which they act.
 - 3. The words "Urban," "Rural," or "Metropolitan" must be inserted in the appropriate space in the heading, according as the District is Urban or Rural, or is within the Metropolitan Area.
 - 4. The "Localities" adopted for the purpose of these statistics should be areas of known population; such as parishes, groups of parishes, townships or wards.

As stated at the head of the first column in each Table, *Public Institutions* should be regarded as separate localities, and the deaths in them should be separately recorded. Workhouses, Hospitals, Infirmaries, Asylums, and other establishments into which numbers of people, and especially of sick people, are received are Public Institutions for the purpose of these statistics.

5. The deaths which have to be classified in this Table (A), and summed up in the horizontal line of "Totals," are the whole of those registered as having actually occurred in the several localities comprised within the Division or District. But the registered number of deaths frequently requires correction before it can give an exact view of the mortality of a Division or District; and the two lowest horizontal lines are provided for the purpose of enabling Medical Officers of Health to indicate, to the best of their ability, what the extent of such corrections should be. Details concerning the corrective figures, e.g., the institutions that have been considered, or the particular localities to which corrections apply, may appear in the text of the report or in supplementary tables.

Area and Population of the District or Division to which this Return relates.

ank headings the names of any that are notifiable in the District, and fill the columns accordingly.

State here the name of the Isolation Hospital used by the sick of the District. Mark (H) the Locality in which

Besides the above-mentioned Diseases, insert in the columns with

State here whether "Notification of Infectious Disease" is compulsory in the District 160: Since when?

ch Hospital is situated; and if not within the District, state where it is situated.

NOTES ON TABLE B.

(See also Notes on back of Table A.)

- Note 1. The present Table B. is concerned with population, births, and sickness (not with mortality) in the district or division to which the Table relates.
 - 2. As stated in the heading of Col. (a), Public Institutions should be regarded as separate localities, and the new cases of sickness in them should be separately recorded. Workhouses, Hospitals, Infirmaries, Asylums, and other establishments into which numbers of people, and especially of sick people, are received, are Public Institutions for the purpose of these statistics.
 - 3. Comments on any unequal incidence of notifiable disease upon the several localities, and considerations as to the local incidence of consumption and other prevalent diseases, should be made in the text of the Report.
